1 Introduction

1.1 What is Silver Inventory System?

Silver Inventory is a complete inventory management system for the any business. This software will guide you through the creation of vendors list, purchase orders, products list, receiving lists, sales orders, invoices, sale and payment receipts. This is in addition to product labels with barcodes, work orders for creation inventory assemblies, customers and vendors balances and various types of reports for monitoring your business . Silver Inventory works as single application and client server system .

Silver Inventory System Features:

1. The simple intuitive interface.
2. Multi-user and system .
3. Usage of 50 character alphanumeric product bar codes.
4. Creates and prints labels of the mostly known Barcodes such as : EAN 13, EAN 8, UPC A, UPC E, ITF, CODE 25, CODE 39, CODE 128, CODABAR, MSI, POSTNET.
5. Supports non-stock and non-depleting product codes.
6. Calculates sale prices and cost .
7. Usage separate product descriptions for invoices and purchase orders.
8. You can group products in storage location and types.
9. System calculates real-time on hand, ordered allocated and available stock levels when orders or invoices are entering.
10. This system allows to conduct payments for obtained products and for ordered products in the purchase orders. It supports partial payments and payment under several orders or receiving lists. The payments arriving for sold products are similarly ensured.
11. Automatically calculates real-time balance for each customer and vendor.
12. You can independently set up the appearance of the invoice, order, payment and receiving receipts.
13. The system and in addition to printing the documents, it can also send E-mails from its own program.
14. You can create and print various types of management reports from our most powerful report wizard.
15. The system is protected with data access control. It can restrict the unauthorized users from having full access to the database by limiting their access to certain management or confidential information.
16. System supports using discounts, shipping and two types of taxes in the invoices and orders.
17. Backups and restores databases and many other powerful features.
18. Exports and Imports information from csv (comma-separated-value) files.

1.2 How to begin?

Lorem ipsum dolor sit amet, consectetur adipiscing elit. Aliquam velit risus, placerat et, rutrum nec, condimentum at, leo. Aliquam in augue a magna semper pellentesque. Suspendisse augue. Nullam est nibh, molestie eget, tempor ut, consectetur ac, pede. Vestibulum sodales hendrerit augue. Suspendisse id mi. Aenean leo diam, sollicitudin adipiscing, posuere quis, venenatis sed, metus. Integer et nunc. Sed viverra dolor quis justo. Lorem ipsum dolor sit amet, consectetur adipiscing elit. Duis elementum. Nullam a arcu. Vivamus sagittis imperdiet odio. Nam nonummy.

Phasellus ullamcorper velit vehicula lorem. Aliquam eu ligula. Maecenas rhoncus. In elementum eros at elit. Quisque leo dolor, rutrum sit amet, fringilla in, tincidunt et, nisi.

Donec ut eros faucibus lorem lobortis sodales. Nam vitae lectus id lectus tincidunt ornare. Aliquam sodales suscipit velit. Nullam leo erat, iaculis vehicula, dignissim vel, rhoncus id, velit. Nulla facilisi. Fusce tortor lorem, mollis sed, scelerisque eget, faucibus sed, dui. Quisque eu nisi. Etiam sed erat id lorem placerat feugiat. Pellentesque vitae orci at odio porta pretium. Cras quis tellus eu pede auctor iaculis. Donec suscipit venenatis mi.

Aliquam erat volutpat. Sed congue feugiat tellus. Praesent ac nunc non nisi eleifend cursus. Sed nisi massa, mattis eu, elementum ac, luctus a, lacus. Nunc luctus malesuada ipsum. Morbi aliquam, massa eget gravida fermentum, eros nisi volutpat neque, nec placerat nisi nunc non mi. Quisque tincidunt quam nec nibh sagittis eleifend. Duis malesuada dignissim ante. Aliquam erat volutpat. Proin risus lectus, pharetra vel, mollis sit amet, suscipit ac, sapien. Fusce egestas. Curabitur ut tortor id massa egestas ullamcorper. Cum sociis natoque penatibus et magnis dis parturient montes, nascetur ridiculus mus. Donec fermentum. Curabitur ut ligula ac ante scelerisque consectetur. Nullam at turpis quis nisl eleifend aliquam. Sed odio sapien, semper eget, rutrum a, tempor in, nibh.

1.3 System Requirements

- Windows 95,98,2000,NT 4,Me and XP;
- 30 MB hard drive space;
- 64 MB RAM;
- Ink or Laser Printer.

1.4 Installation

Before installing use the Silver Inventory System make sure that your system has the required components. In many cases, you will already have everything you need on your system. Otherwise you have to download the necessary files from and install what you are missing. The following service packs are provided by Microsoft at no charge.

MDAC 2.5 - mdac_type.exe - Standard with Windows 2000/Millennium

Visual Basic Runtime - VBRUN60sp5.exe - Standard with Windows 2000/Millennium

DCOM95 - dcom95.exe - Win 95 ONLY (if requested when installing MDAC 2.5)

For your convenience you may download these service packs from . They are easy to download and install, and will ensure that your system has the necessary system files to run the Executive Inventory System.

Windows 2000/XP/Millennium

Windows 2000 and Millennium has everything needed to run Executive Inventory System.

Windows NT4.0

Should have service pack 6 installed.

Windows 95/98/NT4.0

Should have MDAC 2.5 installed, please download from http://www.microsoft.com/data/download_25SP2.htm

Should have Visual Basic Runtime installed, please download from <http://download.microsoft.com/download/vb60pro/Redist/sp5/WIN98Me/EN-US/vbrun60sp5.exe>

While installing MDAC 2.5 on Windows 95, a message may be displayed requesting DCOM be installed. Normally, it will have already been installed by another application and you will not see this message. If you get a request for DCOM, please download and install dcom95.exe from <http://www.microsoft.com/com/dcom/dcom95/download.asp>.

or dcom98 for Windows 98 from <http://www.microsoft.com/com/dcom/dcom98/download.asp>

If your system has MDAC 2.6 installed, download and install the Microsoft Jet 4.0 Service pack. http://www.microsoft.com/data/download_Jet4SP3.htm

2 Main Menu

2.1 New Database

The system is delivered with a ready database "invent11.mdb" which you can use for practical work. If you work with several companies you can create for each a separate database. If you want create a new database in the menu "Database" select item "New database-MS Access description 250 characters" . You can create database on your own computer or any network computer.

You should enter a name of new database in the appeared dialog box.

If the database already exists, Silver Inventory will alert you and if you ignore it, it will replace the existing one. Now you can connect to the new database using Menu Item "Connect".

2.2 Open Database

Lorem ipsum dolor sit amet, consectetur adipiscing elit. Aliquam velit risus, placerat et, rutrum nec, condimentum at, leo. Aliquam in augue a magna semper pellentesque. Suspendisse augue. Nullam est nibh, molestie eget, tempor ut, consectetur ac, pede. Vestibulum sodales hendrerit augue. Suspendisse id mi. Aenean leo diam, sollicitudin adipiscing, posuere quis, venenatis sed, metus. Integer et nunc. Sed viverra dolor quis justo. Lorem ipsum dolor sit amet, consectetur adipiscing elit. Duis elementum. Nullam a arcu. Vivamus sagittis imperdiet odio. Nam nonummy. Phasellus ullamcorper velit vehicula lorem. Aliquam eu ligula. Maecenas rhoncus. In elementum eros at elit. Quisque leo dolor, rutrum sit amet, fringilla in, tincidunt et, nisi.

Donec ut eros faucibus lorem lobortis sodales. Nam vitae lectus id lectus tincidunt ornare. Aliquam sodales suscipit velit. Nullam leo erat, iaculis vehicula, dignissim vel, rhoncus id, velit. Nulla facilisi. Fusce tortor lorem, mollis sed, scelerisque eget, faucibus sed, dui. Quisque eu nisi. Etiam sed erat id lorem placerat feugiat. Pellentesque vitae orci at odio porta pretium. Cras quis tellus eu pede auctor iaculis. Donec suscipit venenatis mi.

Aliquam erat volutpat. Sed congue feugiat tellus. Praesent ac nunc non nisi eleifend cursus. Sed nisi massa, mattis eu, elementum ac, luctus a, lacus. Nunc luctus malesuada ipsum. Morbi aliquam, massa eget gravida fermentum, eros nisi volutpat neque, nec placerat nisi nunc non mi. Quisque tincidunt quam nec nibh sagittis eleifend. Duis malesuada dignissim ante. Aliquam erat volutpat. Proin risus lectus, pharetra vel, mollis sit amet, suscipit ac, sapien. Fusce egestas. Curabitur ut tortor id massa egestas ullamcorper. Cum sociis natoque penatibus et magnis dis

parturient montes, nascetur ridiculus mus. Donec fermentum. Curabitur ut ligula ac ante scelerisque consectetur. Nullam at turpis quis nisl eleifend aliquam. Sed odio sapien, semper eget, rutrum a, tempor in, nibh.

2.3 Backup

It is very important to secure your business data through the backup system using Floppy Disks, Re-Writeable CD's or any other Hard Drives. To do so, click the Menu "Database" and select item "Backup". In the appeared dialog box, choose a location and name for the backup file and save it in any of the available backup drives

2.4 Restore

If you want to restore your data from your backup files in the menu "Database" select item "Restore" and in the appeared dialog box , choose the choice location of the backup file and click button "OK".

2.5 Page Setup

This is the standard method of changing the printer set-up if it is needed.

2.6 Send

With the 'Send" function, you can send an e-mail to the support team of the development company .

2.7 Report Wizard

The Report Wizard will help you to create many kinds of the reports that represent results of your work. You can get to the Report Wizard by selecting the Lists Menu from the Main Form or clicking the button "Reports". The list of the reports is located on the left part of the form. Actually it is the list of the various requests to your database.

If you select the necessary report, the fields of the request will appear at centre of the form in twelve comboboxes. Each combobox corresponds with a column of the report. You can set to the report column any field of the request by selecting it from the combobox list. The column will print in the report then you mark check box "Show" near the combobox. If you want to create the complicated report with a grouping, then mark checkbox "Group by" opposite to an appropriate field. This Wizard also have tools that allow you to use sub-total and sort, to update the check boxes "Sum" and "Sort" in the right part of the form.

If you want to show only the part of the requests you can apply filters.

Establish in a combobox instead of the word "All" a necessary sign or word

("<", ">", "=", "<>", "Between" or "Like") and in the appeared fields enter condition of the filter. If you want to see filter condition on the report, update the check boxes "Print Report Filter". The Wizard saves all set-up of the report therefore if you again want to print this report, it is not necessary to set up it repeatedly.

You can set up a font for each sections of the report using the menu "Fonts". The menu "Headers" allows to edit header and comments of the report. You can also save the report to ASCII comma delimited files using Menu Files "Save As .csv". This format is easily read by many programs, for example, Excel.

When the report is prepared, you can previously look through it having clicked on button "Print Report". If report is all right, click the button "Print".

Help

Cancel

Fields:

Item Code

In the field Item Code you must enter the Item name. This field is alphanumeric field. You can enter letters and numbers. Each item code is unique and the system will not allow to enter two identical name. You have 50 spaces in which you can enter your Product Code.

Invoice description

You must enter invoice description for each product. This description will be used in the sale orders and invoices as the product being sold. Item Code and description are enough to create the new product.

Purchase Order description

You can enter POrder description for product. This description will be used in the purchase orders and receivers as the product being bought. You may not type the POrder description and it will be copied with the Invoice description after saving new product.

Type

You should select type of the new item. The system uses 12 item types: Service, Inventory Part, Non-Inventory Part, Fixed Asset, Other Charge, Subtotal, Group, Inventory Assembly, Discount,

Payment,sales Tax Item,Sales Tax Group.

Cost

The cost is the amount that you have paid for the product when you have bought it. Cost includes the price of purchasing, shipping and taxes. The system automatically recalculates product cost for each new receiver. The cost can be used for calculating sale price.

List Price

The list price is used in the calculation of a sale price. The list price is usually the manufactures suggested retail price.

Price Method

You can use several methods of calculating List and Sale prices:

Manual - a price is not automatically calculated by the system, you must enter a price manually.

% Markup from Cost - InExSy will automatically calculate the list or sale price using the Cost and the percentage. The formula used to calculate this price is:

$(\text{Cost} + (\text{Cost} * (\text{Percentage}/100)))$.

Margin From Cost -The system will automatically calculate the list or sale price using the Cost and the percentage. If margin markups the sale price by 15%, enter 15.00 in the percentage field. The formula used to calculate the price is:

$(\text{Cost} / (1 - (\text{Percentage}/100)))$.

Only for Sale price:

Discount From List - program will automatically calculate the sale price using the List Price and the percentage. The formula used to calculate this sale price is:

$(\text{List Price} - (\text{List Price} * (\text{Percentage}/100)))$.

The system calculates the prices after clicking on the "Recalculate" button.

Sale Price

This is the unit price used in all new Sale Orders and Invoices, which you can change at Invoice's (Order's) any time.

Pref Vendor

The system finds all vendors who have ever delivered this product and fills in their names in the combobox. You can select vendor that you prefer or fill in a vendor name. This field appears on your reports to help you in solving what the vendor you prefer to buy this product from.

Group

The field "Department" is used for classification of the products. You can select already existing Department or enter new Department in this field. You can sort and apply a filter by "Department" in the Items List . The field "Department" can be used in the report wizard.

Weight

It is weight of product unit.

Tax Invoice and Tax PO.

These check boxes allow you to specify if a product is taxable in POrders and Invoices. The system calculates the tax only for taxable products. You can change these options at Invoice's (Order's) any time.

Non-Stock / Non-Depleting.

If you establish one of these options, the system will not update the stock balance for this product. The residual of a non-stock product is always equal zero irrespective of how many you have received or have sold it. The stock balance of a non-depleting product takes into account only receivers of it and doesn't take into account sale. An example of a non-stock product is labor,

freight, software.

Minimum, Maximum and Target Quantity

The system uses these fields for account of an optimum stock level for this product. The Maximum quantity is used by the Overstock Report and the Minimum quantity is used by the Reorder Report. If the residual of this product falls below, the Minimum quantity of it will appear on the Reorder Report, and if the stock level of this product higher, the Maximum quantity of it will appear on the Overstock Report . The target quantity is used to calculate the over-stock or reorder amount.

Hold sales

This option allows you to setup this product as inactive. If you try to add this product to invoice or order , the system will warn you that this product have inactive status.

Comment

To enter any special notes about the product.

Image

You can link any image to this product. You should click on the button "Image" and select image file in the dialog window. We recommend to use files in the .JPG format. The BMP files take too much places in your database. If you click on the button "View" a size of the image will be increased.

Buttons:**Label**

You can create a label for each customer with the help of Label Wizard having clicked on the button "Label"(or View Menu item "Label") .

Template

It is an Editor for Label templates. You can create any receiving list template using mouse and toolbar buttons. You should click on the toolbar buttons "Line","Frame","Image", "Text" ,"Bar Code" or "Data" and paint with mouse this elements. You can use right mouse button and menu items. You should save template in .dtm file after edit. You may create several template for each document. Before printing you should select Template from drop down list.

Ok

Any modifications are made in the Product form will be saved after click on this button.

Close

This button closes the Product form without save. If you want to save all modifications are made in the form click "Ok" button.

Each Payment has unique number and the system will not allow to enter two identical numbers.

Vendor or Customer

You must select a vendor (customer) name in this field. You can add new vendor using row <Add

new>.

Date

You must select a date from the Calendar which will appear after clicking on the field "Date". Here you enter the date of the document.

Date Paid

You must select a date from the Calendar which will appear after clicking on the field "Date". Here you enter the date of the payment.

Payment Method

You can select a payment method from the drop down list or add new method using row <Add new>..

Reference

You can enter here any additional information concerning given payment.

Apply Payment

You can connect payment with receiving or sale of products. Click the button "Invoice", "Receiver" or "Order". This will display a list of existing Invoices or Receivers. You can now select document from List. InExSy automatically will fill fields "Number", "Date", "Balance Due" and "Applied Amount". You can edit a field "Applied Amount" and "Credit" (or "Debit") thus that the field "Paid Amount" corresponded to the valid payment.

You can realize payment for any number of the various documents: Invoices, Purchase Orders, Sale Orders or Item Receipts.

You can delete an unnecessary item if establish on it the pointer and click the button "Delete".

Comment

The Comment field allows you to enter any Payment comments.

Group

The field "Group" is used for classification of the Payments. You can sort and apply a filter by "Group" in the Payments list and reports. The content of this field is not printed.

Buttons:**New Item**

Click the "New Item" button to add additional items to the POrder.

Receivers, Invoices, Orders

Calls the Receivers, Invoices, Orders List form for choice of the product.

Delete

You can delete an unnecessary item if you establish the pointer on it and click the button "Delete".

Options

Click the button of " Options " to open its Form. Here you can change any caption of the Payment to prohibit from printing some fields and set up the mode of taxes calculation. This Options form allows to adjust the payment form in any kind, appropriate for you. The options are saved in a Payment Template.

Template

It is an Editor for Payment templates. You can create any template using mouse and toolbar

buttons. You should click on the toolbar buttons "Line", "Frame", "Image", "Text" or "Data" and paint with mouse this elements. You can use right mouse button and menu items. You should save template in .dtm file after edit. You may create several template for each document (for example packing list for invoice). Before printing you should select the required Template from drop down list.

Print

Use this button to print the Payment Receipt .

E-mail

You can send the Payment Receipt by E- mail using this button. The Payment Receipt will be created as html file and will be sent to your vendor as an attachment of the e-mail .

Save

Use this button to save all the changes you have made in the payment Form, otherwise, they will be lost .

Close

This button is to close the Payment Form whether you made changes or not. But be sure you have clicked the button Save if you want to keep the changes before clicking the Close button.

Form Menu

You can execute any command by clicking on an appropriate button but also by choosing the item of the Form Menu.

11.3 Edit Payment

You can make any changes necessary for existing Payments. To call the form for edit of Payment click " Payment" ("Payment to vendor") button on the main form. From the Payments List form, you have to choose the Payment and click on the "Edit" button(or double click on the Payment row). You can change, add and remove Payment information using any functions of the Payment Form . We do not recommend you to make any changes in the Payment Receipt after it has been sent to your customer or vendor. You can prepare another Payment Receipt for the required adjustment.

12 Export and import

12.1 CSV files

You can export information about your Customers, Vendors and Products to the standard csv (comma-separated-value) file. Select the Menu item "Export" in the Customer, Vendor or Product List and enter the file name for export. Besides you can export any report from the Report Wizard. The first line of the csv file contains column headers, which match a database field name within one of the InExSy database tables. You can view the csv files using Microsoft Excel or Notepad.

You can import data using the menu item "Import" only for Customer, Vendor and Products from csv files with any structure . At first indicate a source file and then in the opened table select approaching fields having clicked on the grid header. Each csv file must contain a column with unique numbers of the customers or vendors or products. During the import process the InExSy looks for unique number values. These records are then imported into the InExSy database. If the unique value already exists, it skips that record so that you do not get duplicates. The incorrect records will stay in the table. You can edit numbers and repeat import. After successful import the table will be empty.

12.2 Excel files

You can import data using the menu item "Import" only for Customer, Vendor and Products from Excel files with any structure. At first indicate a source file and then in the opened table select approaching fields having clicked on the grid header. Each Excel file must contain a column with unique numbers of the customers or vendors or products. During the import process the InExSy looks for unique number values. These records are then imported into the InExSy database. If the unique value already exists, it skips that record so that you do not get duplicates.
